Stochastic	EMU439	Fall/Spring	3	0	0	3	6
Processes							
Prerequisites	EMÜ321 – S	Stochastic Op	erations Resear	ch			
Course language	English						
Course type	Elective						
Mode of							
Delivery							
Learning and	Lectures, di	scussions, pro	oblem solving, a	nd individual stu	ıdies.		
teaching							
strategies							
Instructor (s)							
Course objective	To develop skills to approximate real life stochastic processes under certain assumptions						
Learning	Upon comp	letion of this	course, the stud	ents are expected	ed to		
outcomes	• Ana	alyze Poisson	processes				
	Rec	 Recognize renewal processes and apply them for analysis 					
	• Ana	 Analyze queueing systems with continuous time Markov processes and renewal 					
	pro	cesses					
Course Content	Renewal processes, Poisson processes, Markov Processes with Countable State Spaces,						
	Application	s to Queueing	g system analysi	S			
Deferences	Dinalus NA A	A and Karlin	<u>(2010)</u> Am	latra duction to	Ctachastic Max	daling Ath

1							

Weeks	Topics
1.	Introduction and Review of Probability
2.	Definition and Properties of Poisson processes
3.	Combining and Splitting Poisson Processes
4.	Non-homogeneous Poisson processes
5.	Definition of renewal processes
6.	Asymptotic behavior of renewal processes
7.	Renewal reward processes
8.	Birth-death processes
9.	Uniformization
10.	Midterm Exam
11.	Little's Law
12.	Simple Markovian Queueing Systems
13.	Simple Markovian Queueing Systems with Capacity Constraints
14.	Advanced Markovian Queueing Systems
15.	Study for the Final Exam
16.	Final Exam

Instructor (s)	To be deter	mined by th	e department				
Course objective	• To gain	insight abou	it the basic sear	ch procedures a	nd the most con	nmon basic	
	heuristi	c methods					
	 To analy 	• To analyze some common modern heuristic methods, such as simulated annealing,					
	genetic	genetic algorithms, and tabu search					
	To give	knowledge	on developing a	nd comparing pe	erformance of h	euristic me	thods
Learning	By completi	on of this co	ourse; students v	vill be able to			
outcomes	• Explain	Explain the most common heuristic methods for solving real world problems					
	 Implem 	Implement the most common heuristic methods for solving real world problems					
	Compare and evaluate the performance of the heuristic methods						
Course Content	Fundam	iental conce	pts of heuristics				
	Basic se	arch metho	ds and heuristics	5			
	• Swarm	ntelligence					
	Simulat	ed annealing	5				
	• Tabu se	arch					
	Genetic	algorithms					
	Variable neighborhood search

Weeks	Topics
1.	Introduction to linear programming
2.	Large-scale modeling and solution methodologies
3.	Case study: linear programming
4.	Case study: large scale problems
5.	Case study: transportation/assignment problems
6.	Case study: integer programming
7.	Case study: integer programming
8.	Case study: network models
9.	Midterm Exam
10.	Case study: network models
11.	Case study: queuing theory
12.	Case study: inventory systems
13.	Case study: game theory
14.	Project presentations
15.	Study for the Final Exam
16.	Final Exam

Course activities	Number	Percentage
